Professional Summary

Senior software engineer with 8 years of building business software in PHP and Laravel. For the past three years, focused on fintech: payment gateway integrations, wallets and fund transfers, a double-entry transaction ledger, and affiliate, referral and bonus systems on a platform with 100,000 active users and around 100,000 transactions a day. Earlier work includes leading a team of 5–6 on a multi-company ERP and running its AWS infrastructure, an OAuth2 authentication server for 600–800 tenants, and a telemedicine system running in three Bangladesh Navy hospitals. Currently technical lead on a real estate marketplace SaaS in development and builds React and Next.js front ends for client products.

Technical Skills

Backend: PHP 8, Laravel, CodeIgniter, REST APIs, Redis, queues, payment gateway integration, OAuth2, multi-tenant architecture, .NET Core (C#)

Frontend: React, Next.js, JavaScript, Blade, Tailwind CSS, Bootstrap

Databases: MySQL, MSSQL, query optimization, indexing

DevOps & Cloud: AWS (EC2, RDS), Microsoft Azure, Docker, Kubernetes, Jenkins CI/CD, GitHub, Ubuntu, Nginx, Apache

AI-Assisted Development: Claude Code, Codex, ChatGPT, GitHub Copilot, Cursor — for code generation, refactoring, test writing and code review, with every change reviewed and tested by hand

Leadership: Team lead, requirements analysis, sprint planning, code review, technical interviewing

Professional Experience

Senior Software Engineer — Softic

Dhaka, Bangladesh · Full-time · Nov 2023 – Present

- Build and maintain the backend of a fintech platform with 100,000 active users, processing around 100,000 transactions a day plus the dependent transactions each one triggers.
- Integrated crypto and fiat payment gateways, including webhook handling with automatic retries.
- Built wallet balances, deposits, withdrawals and fund transfers, with a balance-cap circuit breaker and one pending request per payment method.

- Designed a double-entry, append-only transaction ledger with reconciliation checks, and automated 30-second matching of pending deposits against gateway records.
- Prevented duplicate transactions and race conditions under load with state checks under row-level locks, fixed lock ordering, unique-key deduplication and Redis per-user submit locks.
- Implemented API security with JWT and Laravel Sanctum/Passport, role-based access control and encryption of sensitive data, plus KYC verification and fraud checks.
- Built the affiliate and referral system, including level-up/level-down rules and automated bonus distribution.
- Cut a heavy report's load time from about 50 seconds to 15 seconds through query and index optimization.
- Named Employee of the Month at Softic for May 2025.

Senior Software Developer — KoldaTech (Brooklyn, NY)

Remote · Flexible hours · Jan 2026 – Present

- Technical lead on Massara, a real estate marketplace SaaS in development: own the Laravel backend and the servers (Ubuntu on AWS EC2 with RDS, Nginx, Docker, Kubernetes, Jenkins CI/CD).
- Built the React and Next.js front end of badiohub.com and handle its server deployment.

Laravel Developer — Glorious IT

Remote · Contract, project-based · Mar 2024 – Present

- Customize and deploy a Laravel ERP, POS and HRM product for around 20 clients: client-specific features, workflow changes, and query tuning for each client's data volume.

Software Programmer (ERP Project Lead) — Magnetism Tech Ltd.

Chattogram, Bangladesh · Full-time · Feb 2023 – Oct 2023

- Led a team of 5–6 (developers, QA and a designer) as project lead and hands-on developer on a Laravel 10 multi-company ERP and HRM product.
- Ran requirements analysis with clients on site and turned it into module specs and sprint tasks.
- Planned the project, designed the HR and payroll logic and database, and built the supply chain and accounting modules; used by two steel companies with around 2,500 users each.
- Set up and ran production infrastructure: Ubuntu on AWS EC2 with RDS, Nginx and Apache, Docker, Kubernetes, and CI/CD with Jenkins and GitHub.

PHP Web Developer — Small Biz Marketing (USA)

Remote · Part-time · Mar 2022 – Dec 2023

- Built and maintained historychip.com end to end for a US client: PHP, JavaScript, server setup, deployment and performance tuning.

Programmer, Junior Programmer — Genuine Technology & Research Ltd.

Chattogram, Bangladesh · Full-time · Jan 2021 – Feb 2023

- Built a central OAuth2 authentication server for the company's multi-tenant products, which grew to 600–800 tenants.
- Built core pieces of an in-house no-code platform on .NET Core (C#), MSSQL and Microsoft Azure: data handlers, data binders, entity builders, chart components and embedding.
- Maintained and extended HR, payroll, accounts and ERP systems; trained in-house developers and served as a technical interviewer.

IT Executive — Chattala24

Chattogram, Bangladesh · Contract · Sep 2020 – Nov 2020

- Set up network, website and online security for an online media and IPTV startup.

Independent Developer — Navy Care

Chattogram, Bangladesh · Feb 2020 – Aug 2020

- Built a web and Android telemedicine system alone during the 2020 lockdown, with patient, appointment, prescription, pharmacy and lab modules.
- Now running on the local network of three Bangladesh Navy hospitals, open to all Navy personnel and their families.

Programmer, Junior Programmer — Ingenuity Software Solution

Chattogram, Bangladesh · Full-time · Sep 2018 – Jan 2020

- Built features in PHP and CodeIgniter for POS, restaurant, pharmacy, factory management and e-commerce systems; took part in code reviews and debugging.

Selected Projects

- **Fintech Transaction Platform** — Wallets, double-entry ledger, safe withdrawals, webhook settlement and deposit matching at around 100,000 transactions a day. Case study: prothomacharjee.github.io/case-study.html
- **BadioHub** — Client product at KoldaTech; built the React and Next.js front end. badiohub.com
- **Steel Mill ERP** — Multi-company ERP for Mostafa Hakim Group's steel companies, built at Magnetism Tech as project lead of a 5–6 person team. mhakimerp.com
